DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

- 2. Claims 12-14 and 18-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohnishi et al. (U.S. Patent No. 6,885,412, hereafter "Ohnishi").
- 3. <u>As to claim 12</u>, Ohnishi discloses a flat panel display comprising a front glass plate (fig. 3, ref. 2), a rear glass plate (fig. 3, ref. 1), a layer of liquid crystals (fig. 3, ref. 3) interposed between the front and rear glass plates, a TFT array layer (fig. 3, ref. 13)

Application/Control Number: 10/679,977 Page 3

Art Unit: 2871

interposed between the front and rear glass plates, and a metal layer integral (fig. 3, ref. 8) to the TFT array layer (col. 12, line 64 – col. 13, line 2).

- 4. Regarding claims 13-14, Ohnishi discloses the flat panel display device as recited above where the metal heater layer is patterned onto the TFT array layer and is comprised of a grid intersecting horizontal and vertical lines (fig. 3, ref. 11-13; col. 6, lines 6-24).
- 5. <u>As per claims 18-19</u>, Ohnishi discloses the flat panel display device as recited above further comprising a thermal sensor integral to and applied to the TFT array layer (fig. 2, ref. "temperature detection section"; col. 12, lines 54-63).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

Application/Control Number: 10/679,977

Art Unit: 2871

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 7. Claims 2, 4-9, and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohnishi in view of Taniguchi et al. (U.S. Patent No. 6,839,104, hereafter "Taniguchi") and in further view of Shin et al. (U.S. Patent No. 6,417,900, hereafter "Shin").
- 8. As per claim 5-6 and 16-17, Ohnishi discloses the flat panel display device as recited above, however, the reference fails to specifically disclose a black mask EMI layer interposed between the glass plates and where the black mask EMI layer is electrically tied to zero potential and isolated from V_{com} and where the metal heater layer is hidden from view behind the black mask EMI layer.

Taniguchi discloses an LCD device having a black mask EMI layer (fig. 20, ref. 6) disposed on the upper glass substrate and is isolated from V_{com} (fig. 20, ref. 24).

Application/Control Number: 10/679,977 Page 5

Art Unit: 2871

Shin discloses an LCD device having a black matrix layer that has a low electrical resistance set to be at ground potential (col. 5, lines 45-46).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a black mask EMI layer interposed between the glass plates and where the black mask EMI layer is electrically tied to zero potential and isolated from V_{com} and where the metal heater layer is hidden from view behind the black mask EMI layer in the flat panel device of Ohnishi since one would be motivated to prevent light leakage of the light and interface (Taniguchi, col. 2, lines 57-59) as well as obtain a wide-angle viewing display (Shin, col. 9, lines 44-45).

- 9. Regarding claims 2 and 8, Ohnishi discloses the flat panel display device as recited above further comprising an insulating dielectric layer (fig. 3, ref. 9) interposed between the inside surfaces of the front and glass plates and over-coated onto the metal heater layer (fig. 3, ref. 8).
- 10. As to claim 4 and 7, Ohnishi discloses the flat panel display device as recited above where the metal heater layer is patterned onto the TFT array layer and is comprised of a grid intersecting horizontal and vertical lines (fig. 3, ref. 11-13; col. 6, lines 6-24).

11. <u>As per claim 9</u>, Ohnishi discloses the flat panel display device as recited above further comprising a thermal sensor integral to and applied to the TFT array layer (fig. 2, ref. "temperature detection section"; col. 12, lines 54-63).

12. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohnishi, Taniguchi, and Shin, in view of Muhlemann (U.S. Patent No. 6,774,883).

Ohnishi, when modified by Tanaguchi and Shin, discloses the flat panel display device as recited above, however, the reference fails to specifically disclose that the thermal sensors comprise an array of diodes.

Muhlemann discloses an LCD where the thermal sensors comprise an array of diodes (col. 1, lines 56-59).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the thermal sensors Ohnishi to comprise an array of diodes since they are well known in the art of displays (col. 1, line 56). Furthermore, one would be motivated to obtain thermal information without resulting in errors in signal propagation, crosstalk, and inaccuracy in the comparator (col. 1, lines 27-30).

13. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohnishi in view of Muhlemann.

Ohnishi discloses the flat panel display device as recited above, however, the reference fails to specifically disclose that the thermal sensors comprise an array of diodes.

Muhlemann discloses an LCD where the thermal sensors comprise an array of diodes (col. 1, lines 56-59).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the thermal sensors Ohnishi to comprise an array of diodes since they are well known in the art of displays (col. 1, line 56). Furthermore, one would be motivated to obtain thermal information without resulting in errors in signal propagation, crosstalk, and inaccuracy in the comparator (col. 1, lines 27-30).

Double Patenting

14. Claims 2, 4-9, 12-14, and 16-19 of this application conflict with claims 1-3, 5-7, and 12 of Application No. 10/769,843. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application.

Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

Response to Arguments

15. Applicant's arguments filed July 21, 2005 have been fully considered but they are not persuasive.

Applicant's main argument is that Ohnishi does not teach "a metal heater layer integral to said TFT array layer." Applicant supports this be alleging that the

Art Unit: 2871

"temperature adjustment member" of Ohnishi is a metal oxide film that allegedly is "not the same" as a "metal heater." Applicant cites the specification [0029]-[0031] to support this argument. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., that a "metal oxide heater is not a metal heater layer") are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Furthermore, nowhere in the specification, particularly paragraphs [0029]-[0031] is a "metal heater layer" not inclusive of a "metal oxide film heater."

Applicant also argues that the metal heater layer disclosed by Ohnishi is not "comprised of a grid of intersecting horizontal and vertical lines." Applicant' supports this contention be stating that the language of the reference merely suggests that the heater is being "patterned" over a "predetermined display area" and not in a grid and also asserts that this is "inconsistent with the detailed description at col. 9, line 25." However, it is noted that in col. 6, the heater is being "patterned" over a "predetermined display area," which refers to "an area across which pixels are arranged in a matrix [or grid] pattern" (col. 6, line 11-12). Furthermore, Ohnishi describes each of thse pixel regions as being defined as horizontal and vertical lines that intersect each other. As a result, when the heater layer is "patterned" the display area, even as described in col. 9, line 25, it is done so uniformly over the display grid.

Application/Control Number: 10/679,977

Art Unit: 2871

Applicant also argues that Ohnishi's teaching of "at least one thermal sensor to said TFT array" is non-enabling because the teaching is "not shown." However, just because the depiction of the thermal sensor is not shown does not render such a teaching "non-enabled." In fact, it is clearly an element that is disclosed by Ohnishi to "detect the temperature" (col. 12, lines 56-63).

Conclusion

16. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Y. Wang whose telephone number is 571-272-2304. The examiner can normally be reached on M-F, 8 am - 4:30 pm.

Application/Control Number: 10/679,977 Page 10

Art Unit: 2871

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 571-272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
